

Name: _____

Make and Identify Fossils

Identifying rocks I find:

What You Need:

- Plasticene or modeling clay (*this can also be done using a salt dough which will create a hardened fossil*)
- Small objects to put into the clay (paper clips, twigs, plastic animals etc.)

Procedure

Find objects to put into your modeling clay. Use heat and pressure from your hands to leave an imprint (fossil) in the clay.

Share your 'fossil' with others to see if they can guess what your fossil is.

Explain how this is a similar process for rocks that contain fossils.
