

Position of Objects

How well can you describe the position of an object?

What to do:

Work in groups of 3.

Person one holds a book or an object.

Person two is the recorder.

Person three stands with his back facing person 1 and provides them with directions (*The recorder will let person 3 know if the directions are understood by the actions of person 1.*)

Sample directions: 'put the book above your head, put the book between your knees, slide the book across the desk, put the book out in front of.....'

Person 3 records all of the positional words heard as person one performs the position commands.

How many positional words were used?

Was there any confusion for person one following your directions? Why or why not?
