

# Our Sun

The sun is a giant orange and yellow ball of gas in the sky. It is so bright that it gives off light and heat. The sun's light lets us see during the day. The sun helps plants to grow and keeps us warm.

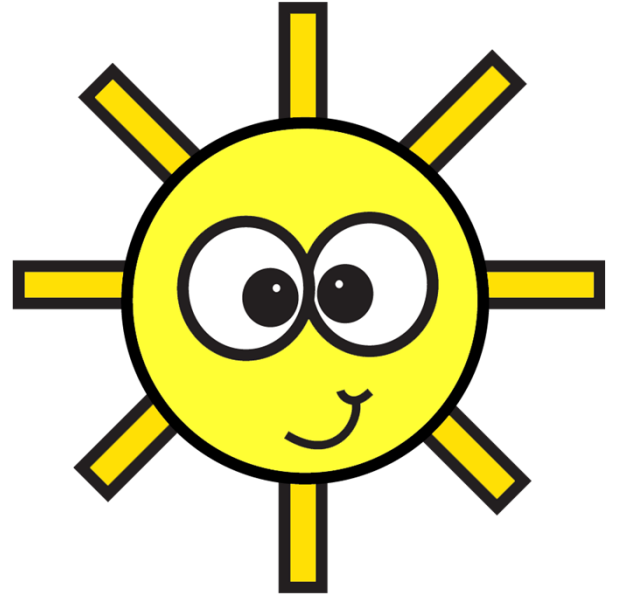

The sun is also a star, just like all the stars we see at night. The sun is so big and powerful that all of the planets move around it. The sun rises in the morning and gives us daylight. The sun sets at night and gives us darkness. Without the sun, we would not be able to live.

1. Read the passage about our sun.
2. Underline each word that you could not read.
3. Circle each word that took you more than 1 try.
4. Answer the questions.

Answer according to the reading passage:

- 1. The sun is a giant ball of:**
  - a. heat
